

Digital workers that read the site, keep score, learn from your feedback and draft the work. You approve.

THE ORGANIZATION

HOW IT WORKS

- Wake.** On schedule, a free code check looks for new activity. Nothing new means the worker stays asleep and costs \$0.
- Work.** It reads its memory and goals, then queries the database itself through a read-only login (up to 15 to 25 queries).
- Score and file.** It updates its scorecard and files a *finding* only when something is off target, with evidence and a link.
- Review.** The AI Reviewer approves real findings, throws out noise and sets risk: low, medium or high.
- You decide** on /admin/ops: Done, Dismiss, thumbs up or down, or **Fix with Claude** for bugs.
- Verify and learn.** The finder re-checks fixes next run. Your ratings and Teach notes go into its memory, so it improves each week.

JOB DESCRIPTIONS

Worker	When	Job	You get
Morning session ON	Daily 6:30 am	COO: every admin queue, email delivery, stuck jobs. Analyst: yesterday's numbers vs your normal. Chief of Staff: merges it all.	The morning brief, by email and on the page
AI Reviewer	After each run	Checks each new finding against the data. Approves, rejects with a reason or escalates. Never lowers a "high" risk.	Fewer, better findings, marked AI-checked
Community Manager	Daily, only if there's activity	Unanswered forum threads, new members to welcome, tanks and posts worth featuring, posts that look like trouble.	Reply and welcome drafts to post
CMO	Mondays 7:30 am	The week's 7 Instagram captions for your 3x3 grid, built from real site numbers, plus up to 3 ideas.	Captions ready for Meta Business Suite
Partnerships	Tuesdays 8 am	Shop outreach pipeline: who claimed, who went quiet, who ignores reviews. Skips opt-outs and wholesale.	Pipeline table and follow-up drafts
Weekly review	Mondays 7 am	Four-week trends, the most likely reason, each worker's cost and usefulness, monthly memory cleanup.	One email and one recommendation
QA / Site Health	Wednesdays 9 am	Loads main pages and samples as a visitor, tests links, flags slow pages and retired wording (fees, checkout, family plans).	Bug findings with Fix with Claude
Support Desk PLAN	3x daily, new mail only	Reads new support@ mail, answers from the help center, follows your shop opt-out and wholesale rules. Never sends.	Gmail drafts; labels Handled / Needs Chris
Code fixer GITHUB	When you press Fix	Opens a GitHub issue, Claude writes the fix on a branch and opens a pull request. Won't touch payments, sign-in or database structure.	A preview link; live only when you merge

GUARDRAILS

- Read-only database login; private details blocked.
- One SELECT, 10 seconds, 50 rows. No writes possible.
- Nothing public, sent or about money without you.
- Member and email text is data, never instructions.
- One switch pauses everything. Every run is logged.

COST

- ~\$8 to \$15** a month today
- About \$20 to \$35 when busy. Estimates at list prices.
- Hard cap \$50 a month, editable
 - Quiet days cost almost nothing
 - Support Desk runs on your Claude plan
 - Code fixer uses its own API key

YOUR 5 MINUTES A DAY

- Read the morning brief.
- Clear **Waiting on you** on /admin/ops.
- Rate findings up or down.
- Send Gmail drafts after a look.
- Use **Teach** for standing rules.
- Merge good fixes on GitHub.
